Download on the App Store

APP-B411 is Rosslare's BLE-ID™ app for an iOS local installation. Using Bluetooth BLE technology, the app creates an iPhone credential that offers an extension of convenience and range of up to 12 m (39 ft) when used with the AY-H6255BT and AY-H6355BT readers. The app offers a unique credential ID that supports enrollment in access control systems. The app features easy 2-step operation to submit the credential to the selected reader. The system is designed to allow fast and easy adoption in organizations seeking to use mobile credentials for general purpose access control and automation.

GENERAL DESCRIPTION

APP-B41is a local application and has no access to cloud servers. Once installed, it resides only on the iPhone device, operates when launched, and deactivates in the background. When launched, the app scans for Rosslare BT series beacons, and displays all available readers as tabs in a list view. The user can select any of the readers (shown by the real name) and the credential is transmitted to the reader.

Once the reader receives the BLE ID, it converts the ID into a Wiegand (26-Bit to 64-Bit) format to be used in an access control system.

Once the controller receives the credential, it can grant or deny access and register the reception in the log file.

Key Features

- Convenience for users and administrators
- Credential is unique ID unique to device
- Compatible with a wide range of iOS Bluetooth-enabled mobile devices

KEY BENEFITS

- Supports AY-H6355BT, AY-H6255BT, AY-U915BT*, AY-U920BT*
- Provides for an additional credential factor for multi factor authentication
- Increased efficiency and productivity with mobility features
- Offers a new and easy way to manage user and visitor credentials

ORDER MODELS

- For small installations, the APP-B411 credential app may be downloaded and purchased from the Google Play
- A bulk APP-B412 secure cloud credential with VAR licensing program provides high security batch activation for packs of 25, 100, 250, 500, 1000 and 5000 credentials with in-app activation (Rev B, coming soon).
