Protection down to the microbe

For nearly three decades, Rosslare has grown steadily in the global access control market, leading the path in innovative products and solutions. Our engineers and designers invest much time and effort thinking about our customers and end users needs, discovering new technologies and trends to make access safer for everyone.

Doors and access control have become the focal point of humans and vehicles, with traffic being redirected to managed access points. As a result, access points have become contaminated; and high density areas that challenge facility operators increase cost of ownership. Keeping these areas clean has become a high priority for small to large organizations.

Rosslare has partnered with a leading provider of registered antimicrobial technology that has a long history of safe and effective use. Introducing Rosslare MicroFree™ technology.

Built-in antimicrobial safeguard

Rosslare MicroFree™ unique technology features antimicrobial and antifungal properties that offer advanced protection, maintaining 24/7 carefree operations while keeping all access points safe and clean – with up to 99.8% reduction in microbes. The process starts in Rosslare's factory during production, while the antimicrobial additive is mixed with the plastic material before injection. This provides the user with complete protection from microbes.

By reducing the transfer of degrading microbes across surfaces, the risk of cross contamination lowers dramatically, keeping employees and customers safer in a cleaner environment.

Rosslare antimicrobial solutions are ideal for facilities that require a higher level of hygiene, such as hospitals, laboratories, surgeries, food manufacturing and more.

MicroFree™ benefits for your safety

- + Up to 99.9% effectiveness***
Protects against a broad spectrum of bacteria.
- + Less contamination across surfaces**
Lower microbial load on the product impedes the transfer of pathogens across surfaces and from one person to another. The MicroFree™ Antimicrobial makes the product safer to use.
- + Products remain cleaner, longer**
Bacteria can multiply in a matter of minutes. By inhibiting growth, products are better maintained and remain cleaner for longer – resisting stains and discolorations and improving product life time.
- + Fights mold and mildew**
The MicroFree™ Antimicrobial protection will work to inhibit the growth of unsightly mold and mildew on the product.
- + Safe for any environment**
Approved for application-appropriate use by the Environmental Protection Agency (EPA) and Biocidal Products Regulation (BPR).

* An official certificate of analysis is available upon request

Protecting your every access

The Covid-19 pandemic has taught us that protection solely against visible threats is no longer sufficient. Recent studies prove that maintaining a clean environment free of microbes and pathogens is critical for public health and safety.

As a leading provider of innovative access and security solutions, Rosslare offers continuous, 24/7 protection against microbial growth on a wide range of security products.
