

Rosslare's Open to Secure Series: Robust Design, Flexible Key Management, and Enhanced Safety Features

Rosslare's Open to Secure series of readers offers one of the industry's most robust and well-thought-out product constructions and designs. They come with a variety of installation options, boasting a sleek design, and are fully potted and weather-protected for optimal outdoor performance. Additionally, they are equipped with a high quality tactile keypad.

The Open to Secure readers provide full flexibility in the key management process, either by providing a Rosslare Desfire key management platform, or allowing for customized customer key management. These readers help customers easily manage their security keys with the simplicity of a regular proximity reader. The Rosslare Open to Secure series offers not only high security but also safety and customer well-being, utilizing our unique MicroFree™ technology to reduce exposure to microbes and fungi.

A comprehensive solution for all your Guard Patrol needs

DigiTool® is a market-proven guard patrol system designed to enhance security and provide peace of mind with ease of use. With DigiTool®, security staff can monitor and supervise patrols effortlessly, ensuring maximum protection.

The system allows for customization of routes and schedules to confuse potential intruders and enhance security. Each security personnel can easily be assigned distinct routes. Acquisition readers are sleek and modern design, while the system remains resistant to impact and falls, ensuring durability and data integrity. Benefit from efficient data collection of completed patrols and various reporting options available, including patrols, events, and exceptions.

Enhanced security measures are included to require guard surveillance, while service quality is improved through performance supervision and immediate action capabilities.
