**ROSSLARE**

Secure your business with Rosslare's standalone & entry level controllers

## Rosslare's Standalone controllers and Convertible readers ideal for reliable access control solutions.

Standalone And Entry Level Controllers
Secured Standalone Controllers (Convertible Readers)

The standalone controllers from Rosslare deliver professional performance, superior construction, and quality while maintaining simplicity and high security. In addition to all-weather and anti-vandal powerful damage protection, the controllers come in a range of designs, forms, and configurations.

With single and dual-door functionality and the ability to expand to 8 doors, Rosslare offers an affordable entry-level Wiegand controller for small applications.

We also offer a unique line of convertible readers that can be converted from readers to standalone secure controllers by connecting a smart power supply. To provide the highest level of security, the processing module was separated from the door opening relay. In addition, distributors need to stock and maintain fewer products, which contributes to operational efficiency.

Convertible stand alone controllers can be found at the following series of products CSN SELECT™, Prox and goPROX, PIN Code Readers, Legacy Biometric Readers.

Need a single-door controller? with the highest security? contact our Global sales team

## Partner Spotlight - RCM Bogota

RCM, Rosslare's partner in Bogota, Colombia, has been a crucial player in ensuring the safety and security of Rosslare's clients of the entire Colombian territory for more than 15 years.

They have provided expert advice on projects, training, after-sales service, and the review and repair of equipment. The team at RCM is highly experienced and knowledgeable in access control systems and security solutions, making them the go-to partner for businesses needing reliable and effective safety equipment. Their attention to detail and dedication to customer satisfaction has earned them a reputation as one of the industry's most trusted and respected partners.

One of their latest projects involves a partnership with Agustiniana University to provide access control and security monitoring for hundreds of doors across two campuses and monitor over 7,000 staff and students entering the campus on a daily basis. The project highlights RCM's commitment to providing comprehensive security solutions tailored to each client's needs.

## SYSCOM EXPO

Last month we were exhibiting at the SYSCOM EXPO in Mexico.

This is what our regional manager has to say about this successful exhibition.

*"We are always happy to participate in the events developed with Syscom, because it is when we have the opportunity to interact face to face with our friends and partners, for us it is very satisfying when people come and tell us experiences with Rosslare, many of them tell us "I am a fan of Rosslare, in love", We also have attendees, who remind us that we trained them in access control, and they tell us: "after the Rosslare certification with you, I successfully added the access control one in our portfolio, and we have been doing very well", so thanks to our partner Syscom for this event and let us live this kind of experiences, because it is something you don't have when you write a mail, or develop an online training. Thank you. Manuel."*
