ROSSLARE

The AxTraxPro™ platform never stops improving

We're proud of our AxTraxPro™ platform, which never stops improving, just recently we have released an updated version with numerous improvements, new feature additions, and game changing integrations that empower users to automate physical access control policies across diverse facilities, making it an ideal solution for organizations and users with the highest demands.

With the ability to manage as small SOHO offices as big sites with thousands of Rosslare networked access controllers and unlimited number of users, AxTraxPro not only enhances security but also offers exceptional scalability and system performance.

We are especially excited to announce an integration with Milesotne XProtect, Hikvision MinMoe finger and face terminals, improved card design options, new integration facilities based on GraphQL, and much more.

Parking Management Upgrade with Rosslare's

In today's fast-paced world, providing secure and hassle-free parking access is crucial for enhancing convenience and staying ahead of the competition. Rosslare recognizes the significance of simple yet robust parking management, and we are delighted to introduce our comprehensive Parking Management Solution: security, efficiency, and ease combined.

The Rosslare system is designed to efficiently manage parking areas and operate gate automation. It can handle multiple gates and defined areas, meaning that Rosslare's system can manage multiple parking lots based on vehicle occupancy. If a lot is full, the system prevents further entry and can activate a relay to turn on a light or sign indicating that the lot is full.

Our solution is based on Rosslare's Long-Range Readers, such as the AY-U915 and AY-U920, or our Long-Range RF readers from the L23 series, supported by an LPR camera system (License Plate Recognition).

Rosslare's Parking Management solutions offer an unmatched combination of scalability, affordability, user-friendliness, and easy installation while prioritizing security, redefined convenience and seamless integration.
