

AxTraxPro™

All purpose access control management software

AxTraxPro features & capabilities

Web management interface

Web client allows operators, managers, and administrators to control their AxTraxPro platform locally or remotely through secure connection, including managing doors, users, and lockdown groups, and viewing network information, reports, and events.

Multi-site & role-based management

AxTraxPro provides advanced role-based permissions that define exactly what each operator can see and control, ensuring secure, efficient, and error-free operations. With built-in multi-site management that also serves multi-tenant environments, the platform creates clean, tailored views for enterprises, campuses, service providers, and large-scale deployments across multiple locations.

Secure Remote Access

AxTraxPro now supports secure remote access via zero-trust connectivity, enabling authorized users to safely manage on-premise systems remotely without exposing servers to the public internet or requiring a traditional VPN.

End-to-end secure communication

AxTraxPro ensures end-to-end secure communication from the credential to the server using industry-standard AES encryption and HTTPS. Session-based security mechanisms protect against man-in-the-middle and replay attacks, while enforced password policies and multi-factor authentication (MFA) strengthen operator access control.

Mobile application

The mobile app¹ enables operators, managers, and administrators to locally or remotely control and manage their AxTraxPro software. It offers a user-friendly mobile application designed for easy execution of daily tasks.

OSDP V2 secure channel

Advanced session-based security between the AC-825IP controller and peripheral devices (i.e., OSDP readers and the R/S/D/P-805 expansion boards).

Lockdown

Monitoring and control tool used for stopping access rights for any group of access point during an emergency event. Ensures secure facility access in a single operation while keeping intruders out, or from moving around the facility.

Integrated platform

Our integrated platform connects access control with video, biometric readers, elevator destination and legacy controls, LPR, and intercom solutions, creating one cohesive system. Streamline user management, automate multi-site access policies, and gain centralized, user-friendly control across your entire security ecosystem.

¹ Supported by AxTraxPro version 28.0.5.2 and below.

The AC-825IP controller now supports up to 6 OSDP Readers

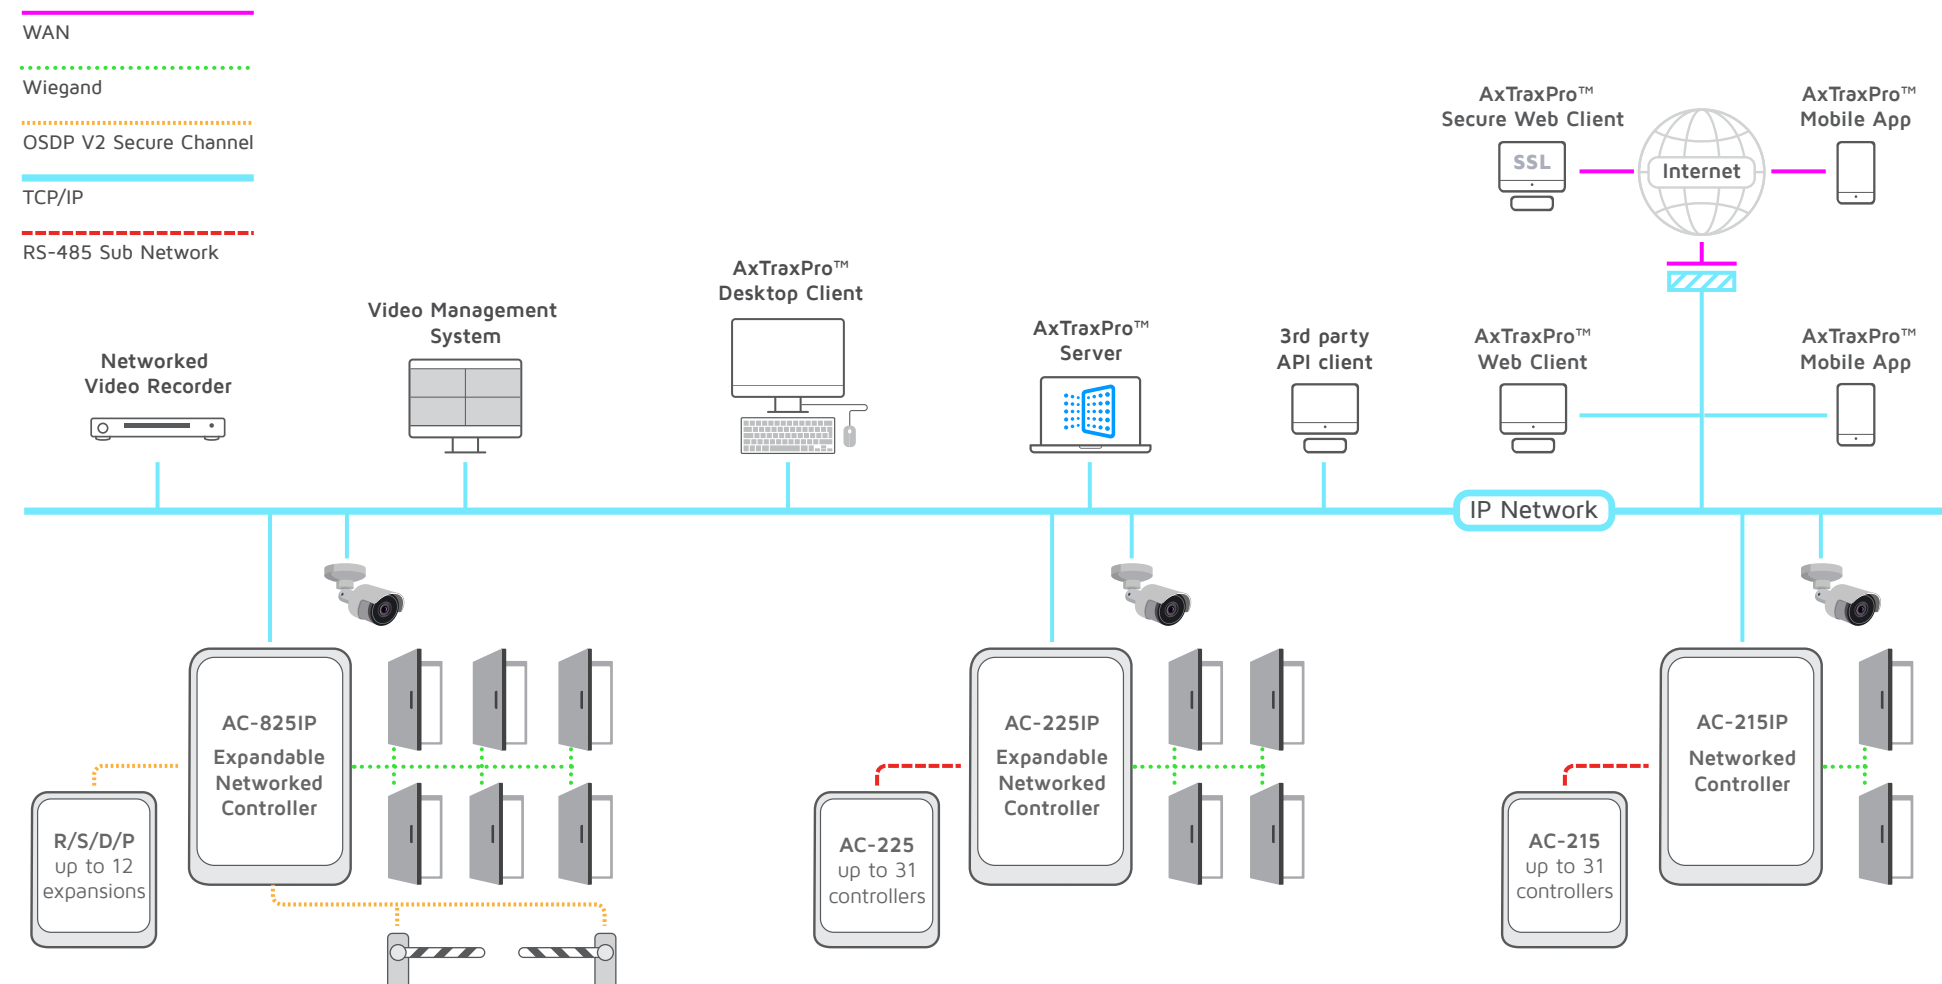

Windows OS 64-bit based software for the AxTraxPro server

RESTful API for a 3rd party integration with the AxTraxPro

Secured all the way

Upgrade your existing Access Control system today!
