

Access control solutions built on decades of trust

Who we are

Rosslare delivers advanced access control solutions combining proven hardware expertise with modern software innovation. Established in 1989, the company supports partners and customers globally across North America, Latin America, Europe, India and Asia.

OEM and customization

OEM and customization capabilities are a core strength. Rosslare enables partners to develop differentiated solutions through hardware adaptation, firmware customization, and branding, supported by full control over design and manufacturing processes.

Access control ecosystem

Rosslare provides a complete access control ecosystem including controllers, multi-technology readers, credentials, and management platforms such as AxTrax on-premise or QxControl cloud-based solutions, enabling centralized and scalable system management.

Industries and applications

Rosslare solutions are widely deployed across commercial real estate, healthcare, education, logistics, and enterprise environments, delivering secure and efficient access management.

Open and scalable architecture

Built on an open architecture, Rosslare solutions integrate seamlessly with leading security and building management systems, allowing organizations to create flexible and future-ready environments. The solutions scale from single-site installations to global multi-location deployments.

Innovation and compliance

With continuous investment in mobile access, secure credential technologies, and modern management platforms, Rosslare delivers future-ready solutions aligned with international standards including ISO, CE, FCC, UL, BIS, NOM, RoHS and others.
