

AY-M30QR / AY-H30QR

Dual-band QR code readers

The versatile access control solution built for modern installations

Rosslare's innovative QR Code Readers deliver an adaptable approach to campus and facility security by bridging traditional physical credentials with dynamic mobile scanning. This architectural solution successfully eliminates operational friction, significantly improving the entry experience for staff, contractors, and short-term guests alike.

Housed in an elegant yet weather-resistant casing, it provides installers and integrators with a reliable, high-performance tool suitable for any commercial environment.

Streamlined visitor management

Enhances on-the-go scheduling flexibility for facility administrators by utilizing dynamic, time-restricted mobile credentials. The solution allows properties to seamlessly handle temporary access permissions and high-volume guest registration without manual desk intervention.

Close focus QR support

Features specialized scanning optics specifically tailored for reading compact 3×3 cm barcodes directly from smartphone screens. This optimized mobile tracking performance is paired with intuitive, dual-color LED display indicators to ensure quick validation without frustrating entry delays.

Multi-technology versatility

Simultaneously supports traditional 125 kHz proximity frequencies and smart 13.56 MHz card standards alongside modern 2D barcodes on a single hardware unit. This broad capability offers security operators the freedom to deploy diverse credential types across their site.

Smooth technology migrations

Simplifies complex legacy upgrades by reading existing RFID transponder UIDs directly and outputting standard IDs to the controller. This allows facilities to easily manage system add-ons and retrofits without facing the high cost of reissuing employee badges.

AxTraxPro platform support

Unlocks simplified security management through native software integration with Rosslare's advanced control platform. The ecosystem allows operators to easily generate, customized QR credentials directly on-site using both Desktop and Web clients.

Superior mechanical design

Housed in a sleek, modern enclosure featuring a protective IP65 surface rating that shields internal components from harsh outdoor elements. Its rugged and durable mechanical construction ensures continuous, reliable operation in demanding public or corporate locations.
